

WEEK 1_REFLECTION

I learned about VSC, Sublime and GitHub websites. I learned about how to make a file and a folder in Visual Studio Code, and to make a code that is inside the index.html and the structured of the html document. The challenges that I encountered is designing to make the website eye catching to the users. Imagining the output and searching how to put the designing elements. Putting the elements in the HMTL document to making the code/website better.
